Application No.: 10/594,238

Art Unit: 1794

Amendment under 37 CFR §1.111

Attorney Docket No.: 062907

REMARKS

Claims 1-2, 5-6 and 9-11 are pending in the present application. Claims 9-10 are

withdrawn from consideration. Claims 1-2 and 5-6 are herein amended. Claims 3-4 and 7-8 are

herein cancelled. New claim 11 has been added. No new matter has been entered.

Information Disclosure Statement

The listing of references in the specification in paragraphs 0002-0005 was not a

proper information disclosure statement.

The Examiner noted that 37 CFR 1.98(b) requires a list of all patents, publications, or

other information submitted for consideration by the Office must be submitted as an information

disclosure statement (IDS).

Applicants hereby submit an Information Disclosure Statement with the references cited

in paragraphs 0002-0005. Applicants respectfully request the Examiner to consider and initiate

the PTO/SB/08a Form and return it with the next Office Action.

Claim Objections

Claims 2, 4, 6 and 8 were objected to because claims 2 and 4, line 3 and claims 6 and

8, line 2 recite "a said".

By this amendment, claims 2, 4, 6 and 8 have been editorially amended to overcome this

objection. Thus, this objection should be withdrawn.

- 5 -

Application No.: 10/594,238

Art Unit: 1794

Amendment under 37 CFR §1.111

Attorney Docket No.: 062907

Rejections under 35 USC §112, Second Paragraph

Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite

for failing to particularly point out and distinctly claim the subject matter which applicant

regards as the invention.

The Examiner asserts that claims 2, 4, 6, and 8 appear to be two separate sentences, and

that the claims are generally narrative and indefinite, failing to conform to current U.S. practice.

The Examiner asserts that there is insufficient antecedent basis for some limitations in the

claims. The Examiner pointed out the limitation "the surface" recited in claims 2 and 4, at line 4,

and in claims 6 and 8 at line 3; "the content" recited in claims 5 and 7 at line 2; and "the

production" recited in claims 6 and 8 at line 1.

The Examiner asserts that "high aspect ratio" recited in claims 1-4 is broad and indefinite.

The Examiner asserts that claim 7 recites titanium oxide whisker, wherein "the content of

non-iron metal atoms is less than 10 at. "and that it is not clear what is the iron and titanium

metal content in the titanium oxide whiskers.

Rejections under 35 USC §102(b)

Claims 3 and 4 were rejected under 35 U.S.C. 102(b) as being anticipated by

Tatsuya (JP 2000-203998).

Claims 3 and 4 were rejected under 35 U.S.C. 102(b) as being anticipated by Den

(US 6,649,824).

-6-

Application No.: 10/594,238 Amendment under 37 CFR §1.111
Art Unit: 1794 Attorney Docket No.: 062907

By this amendment, claims 3 and 4 have been cancelled. Thus, the rejection of these claims has become moot.

Claims 1-2 and 5-6 were rejected under 35 U.S.C. 102(b) as being anticipated by Hayashi (US 2002/136928).

In the amendment, claim 1 has been amended to recite, among other things, "iron oxide whiskers of aspect ratio higher than 20 erected on said surface." The term "whisker" is used meaning "[a] single crystal that has grown in a filamentary form" (see attached "McGraw-Hill Dictionary of Scientific and Technical Terms, Sixth Edition").

The Examiner alleged as follows:

Hayashi teaches hematite particles (iron oxide with the formula Fe2O3), that is formed on the surface of iron alloy; [0103, 0111, 0112, 0114]. Hayashi shows that the hematite particles are oriented in a major axis direction and are considered to be whiskers; [0020]. The recitation "is brought into contact with oxidative atmosphere so as to react the surface iron atoms with oxygen atoms brought into contact therewith at high temperature" of claims 2 and 6 is considered a process limitation that does not impart a structural limitation to the article as claimed. The reference further teaches, for example, the diameter of the iron oxide whiskers of 0.005- $0.3~\mu$; [0022]. This range is within the scope of the applicant's claimed range. The reference teaches an aspect ratio of 10:1 to 25:1; [0080]. This range is within the claimed range. As taught by the art, the whiskers are high-purity, and may contain sodium metal less than 200 ppm; [0070]. This range is within the claimed range for the non-iron metal atoms.

Hayashi describes at cited paragraphs as follows:

[0103] In the consideration of high-density recording, etc., the it is preferred to use the acicular magnetic metal particles containing iron as a main component or the acicular magnetic iron alloy particles. As to the

Application No.: 10/594,238 Amendment under 37 CFR §1,111
Art Unit: 1794 Attorney Docket No.: 062907

magnetic properties of the acicular magnetic metal particles containing iron as a main component or the acicular magnetic iron alloy particles, the coercive force value thereof is usually 63.7 to 278.5 kA/m (800 to 3,500 Oe), preferably 71.6 to 278.5 kA/m (900 to 3,500 Oe); and the saturation magnetization value thereof is usually 90 to 170 Am.sup.2/kg (90 to 170 emu/g), preferably 100 to 170 Am.sup.2/kg (100 to 170 emu/g).

[0111] In the consideration of high-density recording, etc. of the magnetic recording medium, it is suitable that the acicular magnetic metal particles containing iron as a main component or the acicular magnetic iron alloy particles are used as magnetic particles for magnetic recording layer, and the **hematite particles aggregates** uncoated with the surface-coating material are used as non-magnetic particles for non-magnetic undercoat layer. Such a magnetic recording medium has a coercive force value of 63.7....

[0112] The magnetic recording medium produced by using the acicular magnetic metal particles containing iron as a main component or the acicular magnetic iron alloy particles as magnetic particles for magnetic recording layer, and the hematite particles aggregates coated with the surface-coating material as non-magnetic particles for non-magnetic undercoat layer, has a coercive force value of 63.7....

[0114] In particular, in the case of the magnetic recording medium produced by using the acicular magnetic metal particles containing iron as a main component or the acicular magnetic iron alloy particles as magnetic particles for magnetic recording layer, and the high-purity hematite particles aggregates according to the present invention as non-magnetic particles for non-magnetic undercoat layer, the corrosion resistance as represented by the change percentage (%) of coercive force value of the magnetic recording medium thereof is usually not more than 10.0%, preferably not more than 9.5%; and the corrosion resistance as represented by the change percentage (%) of saturation magnetization thereof is usually not more than 10.0%, preferably not more than 9.5%.....

Thus, Hayashi discusses "hematite particles aggregates coated with the surface-coating material." Nothing in Hayashi indicates that the hematite particles are iron oxide whiskers of aspect ratio higher than 20.

Application No.: 10/594,238

Art Unit: 1794

Amendment under 37 CFR §1.111

Attorney Docket No.: 062907

For at least these reasons, claims 1 and 5 patentably distinguish over Hayashi. Claims 2

and 3, depending from claim 1, also patentably distinguish over Hayashi for at least the same

reasons. Also, claim 6, depending from claim 5, also patentably distinguishes over Hayashi for

at least the same reasons.

Rejections under 35 USC §103(a)

Claims 7-8 were rejected under 35 U.S.C. 103(a) as being obvious over Tatsuya.

Claims 7-8 were rejected under 35 U.S.C. 103(a) as being obvious over Den in view

of Tatsuya.

By this amendment, claims 7 and 8 have been cancelled. Thus, the rejection of these

claims has become moot.

New Claim

A new claim 11 depending from claim 1 have been added.

In view of the aforementioned amendments and accompanying remarks, Applicants

submit that the claims, as herein amended, are in condition for allowance. Applicants request

such action at an early date.

If the Examiner believes that this application is not now in condition for allowance, the

Examiner is requested to contact Applicants' undersigned attorney to arrange for an interview to

expedite the disposition of this case.

McGRAW-HILL DICTIONARY OF SCIENTIFIC AND TECHNICAL TERMS

Sixth Edition

McGraw-Hill

New York Chicago San Francisco
Lisbon London Madrid Mexico City
Milan New Delhi San Juan Seoul Singapore Sydney Toronto

On the cover: Representation of a fullerene molecule with a noble gas atom trapped inside. At the Permian-Triassic sedimentary boundary the noble gases helium and argon have been found trapped inside fullerenes. They exhibit isotope ratios quite similar to those found in meterorites, suggesting that a fireball meteorite or asteroid exploded when it hit the Earth, causing major changes in the environment. 2002026436

WHIRLPOOL GALAXY

Whirlpool galaxy (NGC 5194), type Sc, and a companion irregular satellite (NGC 5195).

antenna, used chiefly on vehicles. Also known as fishpole antenna. { 'wip an ten $\mathfrak d$ }

whipcord [TEXT] A twill fabric with fine diagonal cords that is woven of hard-twisted cotton or worsted woolen yarns. { 'wip,kord }

whip grafting [BOT] A method of grafting by fitting a small tongue and notch cut in the base of the scion into corresponding cuts in the stock. { 'wip 'graft in }

Whipple's disease [MED] A disease characterized by infiltration of the intestinal wall and lymphatics by macrophages filled with glycoprotein. Also known as intestinal lipodystrophy. { 'wip-plz di,zēz }

whippoorwill storm See frog storm. { |wip or |wil | storm } whipstock [PETRO ENG] A long wedge dropped or placed in a petroleum well in order to deflect the drill from some obstruction. { |wip,stäk }

whipworm disease [MED] A chronic, wasting diarrhea produced by heavy parasitization of the large intestine by the nematode *Trichuris trichiura*, particularly in undernourished children in the tropics. { 'wip,wərm di,zēz }

children in the tropics. { 'wip,wərm di,zēz }
whirlpool [OCEANOGR] Water in rapid rotary motion.
{ 'wərl,pül }

Whiripool galaxy [ASTRON] A spiral galaxy of type Sc (open spiral structure), seen face on, in the constellation Canes Venatici. { 'wərl,pül ,gal·ik·sē }

whirly [METEOROL] A small violent storm, a few yards (or meters) to 100 yards (91 meters) or more in diameter, frequent in Antarctica near the time of the equinoxes. { 'wor-lē}

whisker See crystal whisker. { 'wis·kər } whiskers See vibrissae. { 'wis·kərz }

whiskey [FOOD ENG] A potable alcoholic beverage made by distilling fermented grain mashes and aging the distillate in wood, usually oak; principal sources of grain are barley, wheat, rye, oats, and corn. { 'wis kë }

whispering gallery [ACOUS] A domed gallery in which weak sounds can be heard at great distances. { 'wis per ing gal rē }

whispering-gallery resonance [PHYS] A resonance that rises in the propagation of waves around the circumference of a circular structure when an integral number of wavelengths can fit into the circumference. { |wis-pər-in | gal-rē |rcz-on-əns } whistle buoy [NAV] A buoy equipped with a whistle; in the United States it is usually a conical buoy with a whistle located on its top. { 'wis-əl |boi }

whistler [GEOPHYS] An effect that occurs when a plasma disturbance, caused by a lightning discharge, travels out along lines of magnetic force of the earth's field and is reflected back to its origin from a magnetically conjugate point on the earth's surface; the disturbance may be picked up electromagnetically and converted directly to sound; the characteristic drawn-out descending pitch of the whistler is a dispersion effect due to the greater velocity of the higher-frequency components of the disturbance. { 'wis-ler }

whistler wave See electron cyclotron wave. { 'wis lər ˌwāv } whistling meteor [ELECTROMAG] Name applied to a radio meteor when a special system for detection is used in which the presence of the meteor is indicated by a rapidly changing audio-frequency radio signal. { 'wis lin 'mēd ē ər }

white adipose tissue [HISTOL] The most common type of adipose tissue, representing stored food reserves and thermal and physical insulation. { wit, ad a pos 'tish u }

white ant See termite. { 'wīt 'ant }

white band disease [INV ZOO] A coral reef disease that is typified by a loss of tissue that is visible as a band of bare white skeleton. { ,wit 'band diz,ēz }

white blood cell See leukocyte. { 'wīt 'blad ,sel }

white body [PHYS] A hypothetical substance whose surface absorbs no electromagnetic radiation of any wavelength, that is, one which exhibits zero absorptivity for all wavelengths. { 'wIt bad ē }

whitecap [OCEANOGR] A cloud of bubbles at the sea surface caused by a breaking wave. { 'wīt,kap } white carbon black [MATER] A white silica powder made

white carbon black [MATER] A white silica powder made from silicon tetrachloride; used as a replacement for carbon black in rubber compounding. { 'wīt 'kār bən 'blak }

white cast iron [MET] "An extremely hard cast iron, rapidly cooled from the melt; contains about 3% carbon in the form of cementite and fine pearlite. { 'wIt 'kast 'I-orn }

white cement [MATER] Pure white portland cement, made

from raw materials with a low iron content, or by using a reducing flame to fire the clinker. { 'wit si'ment }

white clay See kaolin. { 'wīt 'klā } white coal See tasmanite. { 'wīt 'kōl }

white coat [BUILD] The finishing coat in plastering. { 'wIt ,kōt }

white cobalt See cobaltite. { 'wīt 'kō,bolt }

white compression [COMMUN] In facsimile or television the reduction in picture-signal gain at levels corresponding to light areas, with respect to the gain at the level for midrange light values; the overall effect of white compression is to reduce contrast in the highlights of the picture. { 'wīt kəm,presh ən }

white copperas See zinc sulfate. { 'wīt 'käp·rəs } white corpuscle See leukocyte. { 'wīt 'kör·pə·səl }

white cutch See gambir. { 'wīt 'kəch }

white damp [MIN ENG] In mining, carbon monoxide (CO); a gas that may be present in the afterdamp of a gas or coaldust explosion, or in the gases given off by a mine fire; it is an important constituent of illuminating gas, supports combustion, and is very poisonous. { 'wit damp }

white dlarrhea See pullorum disease. { 'wīt ˌdī·ə'rē·ə } white dwarf star [ASTRON] An intrinsically faint star of very small radius and high density; the mass is about 0.6 that of the sun and the average radius is about 5000 miles (8000 kilometers); it is one final stage of stellar evolution with thermonuclear

energy sources extinct. { 'wit |dworf 'stär } white feldspar See albite. { 'wit 'fel,spär }

whitefish [VERT ZOO] Any of various food fishes in the family Salmonidae, especially of the genus *Coregonus*, characterized by an adipose dorsal fin and nearly toothless mouth. { 'wīt,fish }

white frost See hoarfrost. { 'wīt 'frost } white garnet See leucite. { 'wīt 'gär·nət }

white graphite See hexagonal boron nitride. [,wit 'graf, it] whiteheart malleable iron [MET] White cast iron malleableized and decarburized by heat treatment in an oxidizing material at 900°C for 100-150 hours; decarburization produces a light-colored fracture, in contrast to blackheart malleable iron, which is not decarburized. Also known as blackheart malleable iron. ['wit,härt 'mal-yə-bəl 'ī-ərn]

white infarct [MED] An infarct in which hemorrhage is slight, or that has been decolorized by removal of blood or its pigments. { 'wit 'in,färkt }

white iron [MET] A brittle cast iron whose total carbon content is in the combined forms, and containing little or no graphite; a fresh fracture is white. { 'wīt 'ī-ərm }

white iron ore See siderite. { 'wīt 'ī-ərn ior }

white lead [INORG CHEM] Basic lead carbonate of variable composition, the oldest and most important lead paint pigment; also used in putty and ceramics. { 'wīt 'led }

white level [COMMUN] The carrier signal level corresponding to maximum picture brightness in television and facsimile. { 'wīt ,lev əl }

white light [OPTICS] Any radiation producing the same color sensation as average noon sunlight. { 'wīt 'līt }

white light hologram [OPTICS] A reflection hologram which can be viewed with an ordinary light source. { 'wit 'lit 'häl ə,gram }

white metal [MET] 1. Any of several white-colored metals and their alloys of relatively low melting points, such as lead, tin, antimony, and zinc. 2. A copper matte of about 77% copper, obtained from the smelting of sulfide copper ores. ['wir med-al]

white-metal bearing alloy See lead-base babbitt. { 'wit ,medal |ber-in 'al,oi }

white mica See muscovite. { 'wīt 'mī kə:}

white mineral oil [MATER] A highly refined, colorless hydrocarbon oil with low volatility; used as a laxative and in medicine. Also known as liquid petrolatum; paraffinum liquidum. { 'wit 'min rel oil }

white muscardine [INV 200] A disease of the silkworm caused by the fungus *Beauveria bassiana*. { wīt 'məskər,dēn }

white nickel See rammelsbergite. { 'wīt 'nik əl }

whitening filter [ELECTR] An electrical filter which converts a given signal to white noise. Also known as prewhitening filter. { 'wit nin , fil ter }

white noise [PHYS] Random noise that has a constant energy

crystogen See cystamine. { 'kris·tə·jən }

crystosphene [HYD] A buried sheet or mass of ice, as in the tundra of northern America, formed by the freezing of rising and spreading springwater beneath alluvial deposits. { |kris·tə|sfen }

cs See centistoke.

Cs See cesium; cirrostratus cloud.

csc See cosecant.

C scan See C scope. { 'sē .skan }

csch See hyperbolic cosecant.

C scope [ELECTR] A cathode-ray scope on which signals appear as spots, with bearing angle as the horizontal coordinate and elevation angle as the vertical coordinate. Also known as C indicator; C scan. { 'sē ,skop }

C size [ENG] One of a series of sizes to which trimmed paper and board are manufactured; for size CN, with N equal to any integer, the length of the longer side is $2^{3/8-N/2}$ meters, while the length of the shorter side is $2^{1/8-N/2}$ meters, with both lengths rounded off to the nearest millimeter. { 'sē sīz }

CSMA/CD [COMPUT SCI] A method of controlling multiaccess computer networks in which each station on the network senses traffic and waits for it to clear before sending a message, and two devices that try to send concurrent messages must both step back and try again. Abbreviation for carrier-sense multiple access with collision detection.

CSP See control switching point.

CSSB system See companded single-sideband system. { |sē,es,es|bē ,sis·təm }

C stage [ORG CHEM] The final stage in a thermosetting resin reaction in which the material is relatively insoluble and infusible; the resin in a fully cured thermoset molding is in this stage. Also known as resite. { 'sē stāj }

CSW See channel status word.

CT See center tap; computerized tomography.

CIM See computer input from microfilm.

CTC See centralized traffic control.

ctDNA See chloroplast deoxyribonucleic acid.

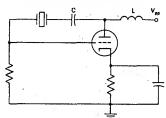

CTD recorder See salinity-temperature-depth recorder. [!setē¦dē ri'kord·ər }

ctenidium [INV ZOO] 1. The comb- or featherlike respiratory apparatus of certain mollusks. 2. A row of spines on the head or thorax of some fleas. { tə'nid-ē-əm }

Ctenodrilidae [INV 200] A family of fringe worms belonging to the Sedentaria. { $ten \cdot a^{\dagger}dr\overline{r} \cdot la_{i}d\overline{e}$ }

ctenoid scale [VERT ZOO] A thin, acellular structure composed of bonelike material and characterized by a serrated

CRYSTAL OSCILLATOR

Circuit diagram of Pierce crystal oscillator, C is capacitor, L is inductor, and V_{pp} is plate voltage.

CTENOID SCALE

Ctenoid scale from carp.
